Kate Henderson, UN SDG Lead, City of Melbourne

Q&A

Wrap up

**Acknowledgement
of Country.**

A vibrant community garden scene with several people working in raised beds. A man in a grey shirt is bent over, tending to plants in the foreground. Behind him, a woman in a white shirt and another person are visible. The garden is filled with various green plants, including tall stalks and leafy vegetables. In the background, a modern building with large windows and green accents is partially visible through the foliage.

ABOUT THE MAV

Helping local councils build a resilient & sustainable Victoria

MAV Strategic Plan .

About the MAV.

Our Purpose and Vision.

Our purpose is to mobilise action that supports Victorian councils to create cities, regions, and towns that are thriving, resilient and inclusive communities.

Our vision is to be a nation leading thought leader, partner and resource hub for the Victorian local government sector in strategic foresight, policy and research, leadership and governance, service design and advocacy impact.

1. Active local democracy

We will work with local government and other levels of government to ensure that local policies reflect the needs and preferences of local communities. Effective local democracy can facilitate public participation, improve service delivery, strengthen communities, and improve development outcomes.

3. Health & wellbeing

We will work with the local government sector, community health organisations, the acute health sector and other levels of government to improve population health and wellbeing, creating place-based services that meet the diverse needs, experiences and identities of different population groups at different life stages.

2. Connected places

We will work with the local government sector to inspire people to collectively reinvent the public spaces at the heart of their communities, creating places that connect people to resources, opportunities, and to each other. We will strengthen the connection between people and the places they collectively inhabit through urban planning, transport, built forms, and the creation of a collaborative process by which we can shape our places to maximise shared value.

4. Sustainable economy

We will work with the local government sector to design and support practices that facilitate long-term economic growth without negatively impacting the social, environmental and cultural aspects of the community. To do this, we will explore diverse strategies for achieving economic growth that strengthen local industries and improve circular economy performance. We will prioritise working with councils to enable the right conditions for creative and entrepreneurial thinking to meet future challenges and needs.

5. Future Gen

We will embrace FutureGen, a movement to improve lives in the present, the future, and for years to come. By collaborating with young people and the local government sector, we will drive long-term change for future generations. These changes will encompass a wide range of initiatives, mobilising people from all backgrounds to reshape our ways of living, working, and future planning.

6. First Peoples local government relations

We will work with the First Peoples' Assembly to connect with councils across the state to build understanding and capacity in treaty negotiations and continue to close the gap.

8. Diversity, equity & inclusion

We will collaborate with local governments, partner organisations, and communities to craft policies and initiatives that enhance representation and participation across diverse groups. Our commitment to diversity, equity, and inclusion (DEI) spans various ages, races, ethnicities, abilities, genders, religions, cultures, and the LGBTIQA+ community, ensuring a broad spectrum of perspectives and experiences are valued and integrated.

10. Intergenerational infrastructure

We will work with the local government sector to ensure funding is invested by all levels of government into intergenerational infrastructure, ensuring the population is supported by the necessary services and facilities as it grows. By working to ensure the funding of public transport, roads, and community facilities, we will enable economic and productivity growth by reducing congestion and allowing people to move efficiently around their communities and the state.

7. Climate & regenerative design

We will work with the local government sector, civil society, universities and other levels of government to plan and design for climate change, using regenerative approaches, technology, and innovation to create more resilient urban communities.

9. Resilience & recovery

We will work with the local government sector, as well as state and federal agencies, to enhance the economic and social resilience of communities to withstand and recover from disasters, including the effects of climate change. This will involve extensive collaboration on community-identified disaster resilience projects throughout the state, aimed at enhancing local preparedness and resilience against future disasters.

Shaping our Future.

Sustainable Development Goals.

The UN's 17 Sustainable Development Goals (SDGs) are designed to deliver a **better future for everyone.**

While not legally binding, they act as a framing mechanism for measuring progress toward environmental, economic, and community outcomes.

For these reasons, the SDGs underpin the strategic priorities in our strategic plan.

Shaping our Future.

Sustainable Development Goals.

THE GLOBAL GOALS

For Sustainable Development

For the City of Melbourne, the Sustainable Development Goals act as a guiding framework to achieve a more socially inclusive, environmentally sustainable, and economically just future for the municipality by 2030.

To get the Sustainable Development Goals (SDGs) back on track we need to reshape our approaches to implementation, including localization. Localization done differently involves progressing beyond symbolic piecemeal efforts, prioritizing the SDGs with the greatest gains, and pluralizing interpretations and pathways for actions.

More than 17 Global Goals..

11.1 By 2030, ensure access for all to adequate, safe and affordable housing and basic services and **upgrade slums**

11.1.1 Proportion of urban population living in slums, informal settlements or **inadequate housing**

13.2 Integrate climate change measures into national policies, strategies and planning

13.2.1 Number of **countries** with **NDCs**, long-term strategies, **national** adaptation plans ...

13.2.2 Annual greenhouse gas emissions

- 13.2 WCCD SDG Indicator Equivalents:**
- Greenhouse gas emissions (tonnes per capita)
 - Energy for public buildings (KWh/m2/yr)
 - Percentage of total energy derived from renewable sources, as a share of the city's total energy consumption
 - Percentage of commuters using a travel mode to work other than a personal vehicle
 - Green area (hectares) per 100,000 population
 - Number of trees planted per 100,000 pop. p.a.

1.2 By 2030, **reduce at least by half** the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions

1.2.1 Proportion of population living below the national poverty line, by sex and age

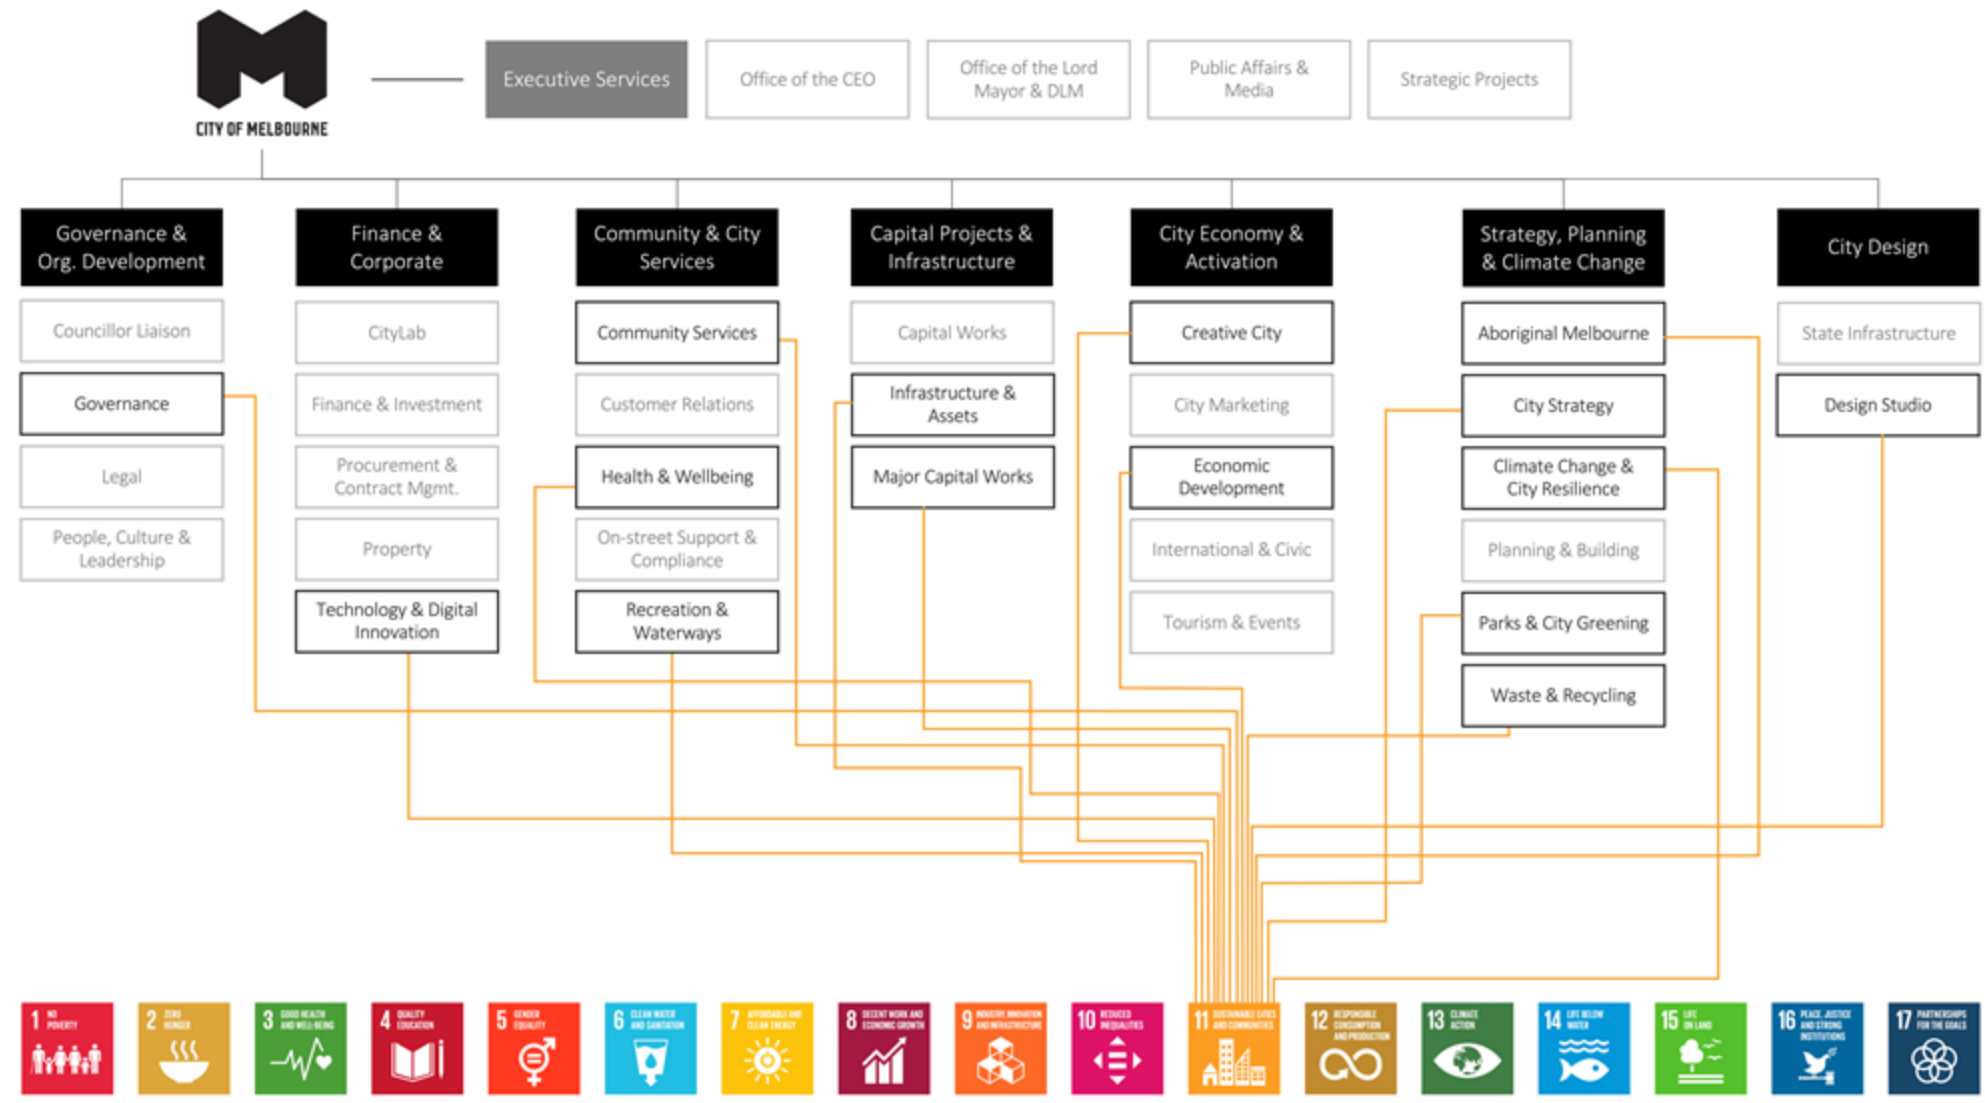

***** Indicator

Urban Target

Non-Urban Target

Means of Implementation (MOI) Target

Understanding the ‘why’

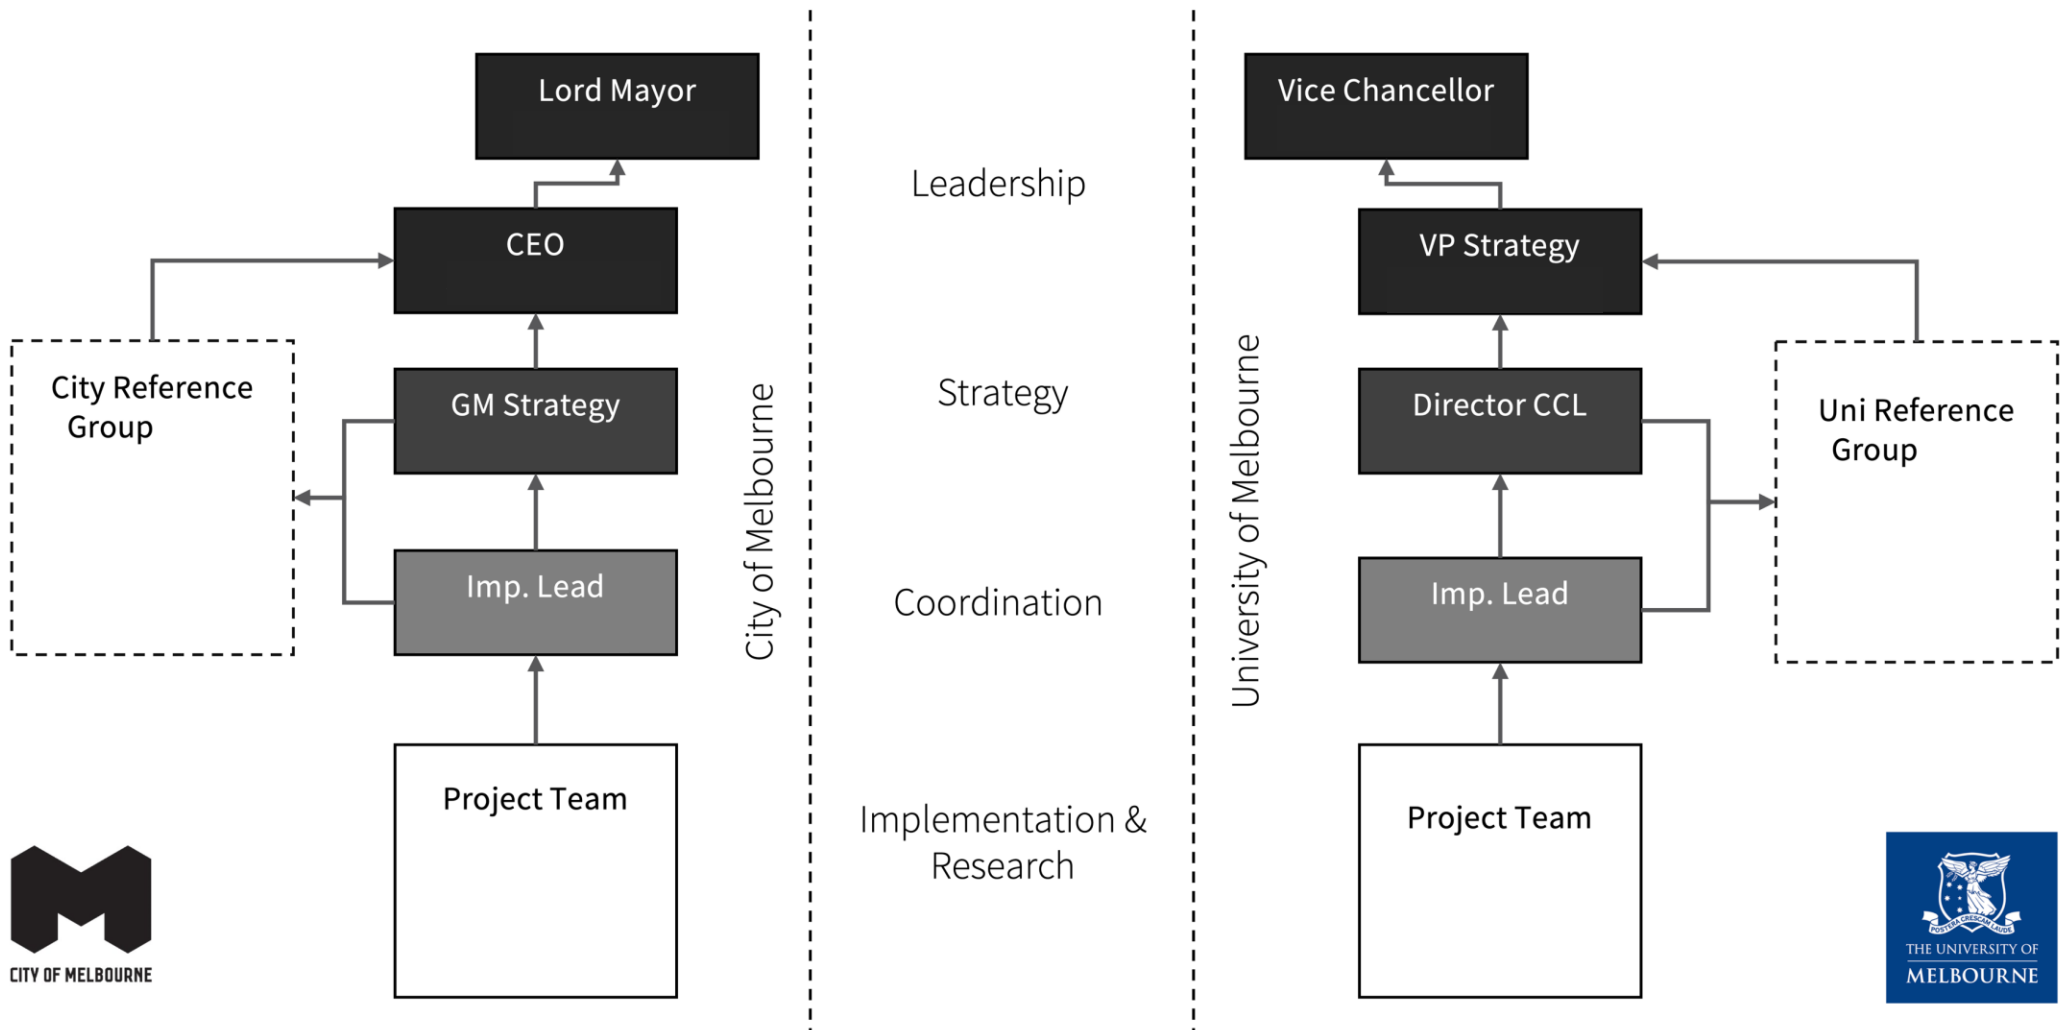

Maximizing Relevance

1.1 By 2030, eradicate extreme poverty for all people everywhere, currently measured as people living on less than \$1.25 a day

Our Journey

Climate Change

SDGs conversations between
Council and University of
Melbourne

COVID-19 Pandemic

Measures our performance as a municipality against 16 Goals, 89 targets and 300+ indicators

1 NO POVERTY

Targets

1.2
By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty within the City of Melbourne in all its dimensions according to national definitions

1.3
Implement nationally and locally appropriate social protection systems, services and measures for all, including floors, and by 2030 achieve substantial coverage of the poor and the vulnerable

1.4
By 2030, ensure that all men and women, in particular people experiencing socioeconomic disadvantage and vulnerability, have equal rights to economic resources and housing, including access to basic and financial services

1.5
By 2030, build the resilience of people in the City of Melbourne experiencing socioeconomic disadvantage and in vulnerable situations, and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters (refer 11.5)

Poverty is a complex issue everywhere. The likelihood of experiencing and overcoming poverty is influenced by interdependent factors such as access to work and affordable community services, and income, education, housing, health and inclusion. It is disproportionately experienced in Australia by Aboriginal peoples, young people, older people, women, people with a disability and migrants. This means that achieving many other Goals also relies on reducing poverty, such as Goal 2 – No Hunger, Goal 3 – Good Health and Wellbeing, Goal 4 – Quality Education, Goal 8 – Decent Work and Economic Growth, Goal 10 – Reduced Inequalities, and Goal 11 – Sustainable Cities and Communities.

There is no nationally agreed definition of poverty in Australia. We adopt the OECD definition of the poverty line as half the median household income of the total population, this translates to a single adult living on less than \$426.30 a week. For a couple with two children, it is \$895.22 a week.

COVID-19 has highlighted the vulnerability we face when a crisis occurs. The interconnected nature of existing chronic stresses overlaid with an acute shock can have disproportionate impact. We have witnessed challenges with access to food, housing affordability, job losses and reduced wages.

City of Melbourne is responsible for providing programs that alleviate the lived experience of poverty for community members, as opposed to specifically reducing poverty. As the home of Melbourne's central business district, we also have a unique role to play in supporting economic activity via services and infrastructure, fostering the creation of decent, sustainable jobs, as well as advocating to other levels of government on behalf of the community.

Source: Geographia

Proportion of population living below the national poverty line (i.e. living on less than 50% of Australian median income)

Approximately
13,200 people living in poverty in 2019
7.4% of 2019 CoM population

Source: ABS

Gini Coefficient (in 2018) (relative income inequality - where 0 is perfect income equality and 1 is perfect inequality)

Data coverage
Income alone does not represent the complexity of factors that affect poverty, but it does allow for measurement over time and comparison with other cities. Data on income distribution (Gini coefficient) at the local level can be more difficult to obtain.

Progress snapshot
The proportion of the population living in poverty fell from 9.1 per cent to 7.4 per cent between 2015 and 2019. Income inequality slightly worsened between 2015 and 2018 in comparison to the metropolitan Melbourne average.

How we localised the UN targets to suit the City

 Urban Target

 Non-Urban Target

 Means of Implementation (MOI) Target

 *

Indicator

Working with our university partner **University of Melbourne Centre for Cities** we developed an agreed and rigorous approach to localising the UN Targets.

The Melbourne SDG Principles:

Goals are consistent with the global SDG framework, to provide a common language for all

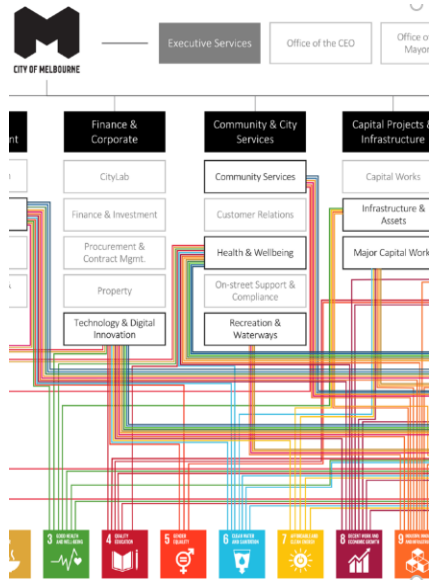

Targets are 'localised' or 'translated' to suit the local context only where the global target is not suitable.

Indicators are selected with priority given to globally and regionally standardised measures, to facilitate city-to-city benchmarking and learning.

5 Step journey to committing to the UN SDG framework

Step 1. SDG mapping against branch functions and services

- Demonstrated that Council contributes to all SDGs

City of Melbourne United Nations Sustainable Development Goals

Over the past year, the City of Melbourne has sought to understand how well it is progressing to we partnered with the University of Melbourne Connected Cities Lab to adapt the globally recognised Melbourne context, we were able to identify a preliminary set of indicators to inform the develop

We have now produced a more comprehensive list of Indicators, drawing from a pool of Indicators primary prioritised indicators for the City of Melbourne in this indicator suite for the next four years. This will help us track Melbourne's performance against the SDGs over time and better info

SDG	Target no.	Localised Target for CoM
1 No Poverty	1.2	1.2 By 2030, reduce at least by half the proportion of men, women and their dimensions according to national definitions
	1.3	1.3 (ADVOCACY) implement nationally appropriate social protection systems and cover all the vulnerable
	1.4	1.4 By 2030, ensure that all men and women, in particular people exposed to economic resources and housing, including access to basic and financial
	1.5	1.5 By 2030, build the resilience of people in the City of Melbourne exposed to climate-related extreme events and reduce their exposure and vulnerability to climate-related extreme events
2 Zero Hunger	2.1	2.1 By 2030, end food stress and ensure access by all people, in particular vulnerable situations, including infants, to safe, nutritious and sufficient
	2.2	2.2 By 2030, end all forms of malnutrition and address the nutritional needs of pregnant and lactating women
	2.4	2.4 By 2030, support sustainable food production systems and supply of agriculture, balancing local food production with biodiversity needs and
	2.5	2.5 Support urban agriculture, greening and conservation efforts that do and cultivated plants and their related wild species
	3.1	3.1 By 2030, reduce the municipal maternal mortality ratio to less than

Step 2. Finalised localised SDG Dataset

- Includes 16 Goals, 88 Targets, 300+ indicators tracking data trends from 2015

Step 3. Voluntary Local Review of Municipality SDG Performance 2022

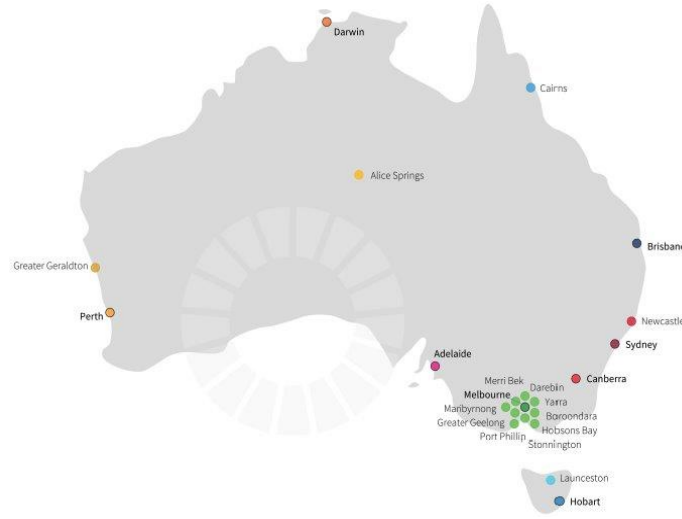

- Includes narrative about performance achievements and areas for improvement

Step 4. Partnerships for the SDGs: Cross-Sectorial Forum

- Hosted 80 stakeholders across all industries to discuss partnership opportunities to progress the goals.

Step 5. Global and Local Benchmarking

Benchmarking

Ideally, the SDG targets and indicators can be compared and contrasted with other cities, regions and LGAs.

A first attempt to benchmark the City of Melbourne against its global peers on individual SDG progress

Opportunities

- City peer knowledge share to accelerate mutual learning, action and progress

Report prepared by The University of Melbourne Centre for Cities, Monash University Sustainable Development Institute

Benchmarking Insights

CoM performs **well above average** indicators relating to 3, 9, 11

CoM performs **comparatively better** in indicators relating to goals 4, 5

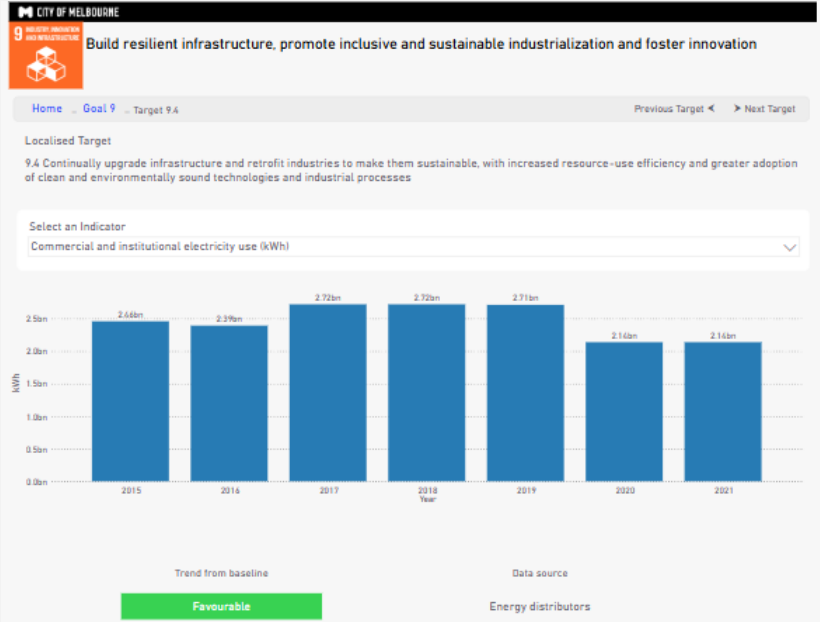

CoM performs **below average** in indicators relating to goals 1, 3, 8, 11, 13

Tracking Progress

Tracking municipal progress

GOAL 9 Industry Innovation & Infrastructure											
LOCALISED TARGET	INDICATOR	2015	2016	2017	2018	2019	2020	2021	UNIT	TREND	LIKELY COVID IMPACT
9.4 Continually upgrade infrastructure and retrofit industries to make them sustainable, with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes	Commercial and institutional electricity use	2.459	2.393	2.720	2.721	2.712	2.138		kWh billion	↓	✓
	Commercial and institutional gas use	2.555	2.555	2.856	3.212	3.311	2.694		GJ million	↑	✓
	Industrial electricity use	414.5	403.3	178.1	174.8	216.6	252.5		kWh million	↓	✓
	Industrial gas use	2.911	2.911	2.478	2.583	2.620	2.066		GJ million	↓	✓
	Refer to 12.2 for resource-use efficiency and 13.2 for GHG emissions indicators										

SDG Data Set

In 2022 the SDG dataset was in an **excel** document

Since then, it has been migrated into our Corporate Planning and Performance platform and matched to appropriate data owners across the organisation

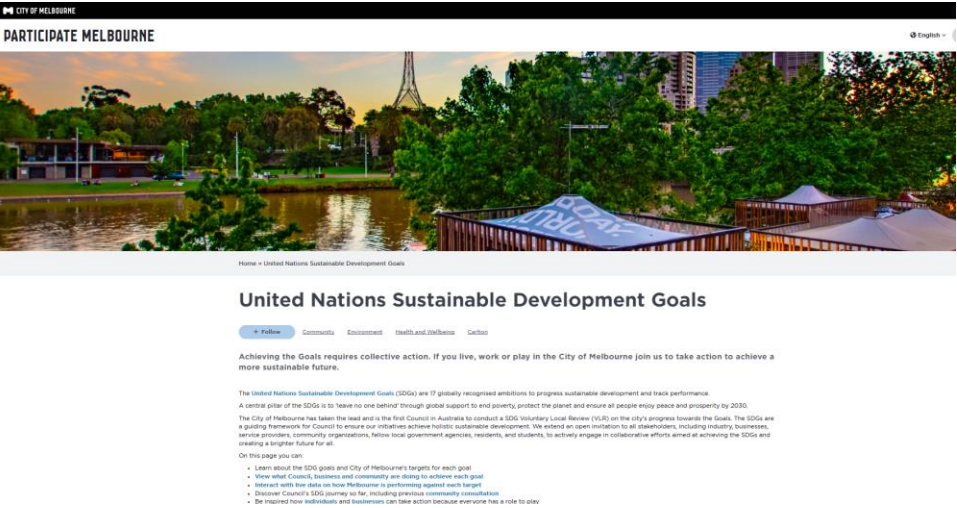

Data is updated when it's available

Digital data dashboard

In 2023 the data has been extracted into a Power BI Dashboard helping users to understand if the trends are favourable, unfavourable or no change.

The dashboard is publicly available on our City of Melbourne **Open Data Platform** and have your say page: **Participate Melbourne**.

Sustainable Development Goals in the public domain

Promoting Action

Achieving the Goals requires collective action. SDG resources for all who live, work or play in the City of Melbourne.

- Learn about the SDG goals and City of Melbourne's targets for each goal
- Find business and council SDG case studies and translated materials

Open data – end users

School students and entrepreneurs have been using the SDG data dashboard to identify goals of interest, review the city's progress and explore ideas to take action

New initiative

In the next financial year, we supporting small business to assess their SDG impact, plan business improvements and take a pledge for action (SDG Align Platform)

Mainstreaming SDGs and Making Impact

Embedding SDGs and tracking impact

Tracking impact via:

Internal:

- Alignment to Council Plan and all branch plans and major initiatives
- Corporate project management framework (tracking proposed and actual SDG impact)
- Governance (ESG Framework)

External:

- CoM Small Business, circular economy, social enterprise grants
(tracking proposed and actual SDG impact)

All new strategies and plans are aligned to SDGs

- Economic Development Strategy (draft)
- Inclusive Melbourne Plan
- Homelessness Strategy
- Food City
- Heritage Strategy
- Greenline Master Plan

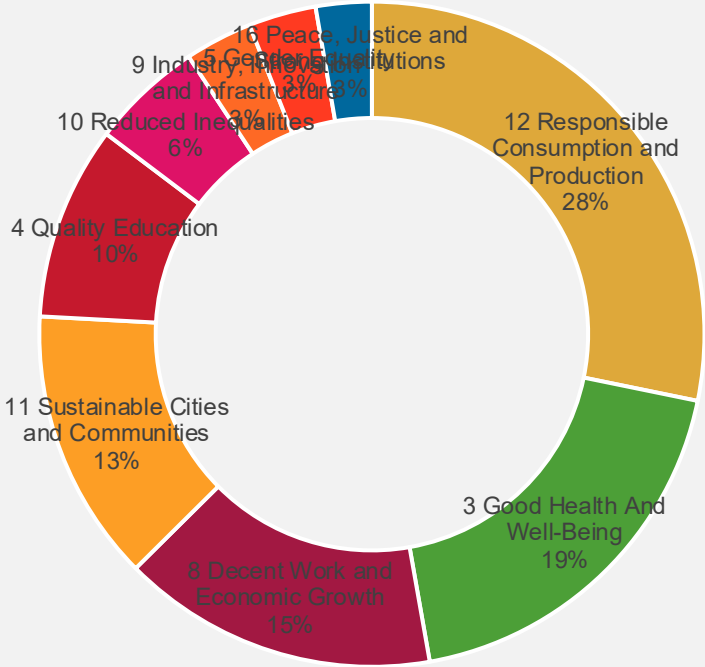

SDG tagging – assessing Council's areas of impact

Tracking our Council Plan Major Initiatives 2021-2025

Tracking our SDG target coverage with our Major Initiatives and branch labour budgets to understand potential areas of impact

Small Business Grants Investment 2025

Tracking our Small Business Grants

Analysing how we're investing our small business grants through asking businesses to self-assign the goal most aligned to their business operations or funding proposal.

Sustainable Development Goals | A framework for innovation

Inspiring innovation

35 subject matter experts (Goal Champions) have completed

- an online SDG learning module,
- SDG data pre-reading,
- three workshops and offline discussions

Outcomes: 19+ quick wins and 14 pitched SDG fast-track projects to the CEO and other sponsors. Some have been completed.
